Main Features

Alkaes Users Security provides a set of Customfields that allows you to implement powerful Security Schemes.

The **Single and Multi Project Role Pickers** allowing to pick one or more Project Roles.

The **Users From Selected Role** is dynamic Customfield, able to render the users of one or more role identified in another CustomField.

The **User By Permission Picker** allows to a User depending on a set of Permissions.

And finally, the **User From Other Issue User Field** allows to render on or more users depending on other Issue Fields following different rules.

Under construction
