Linked Issue Creation

Overview

The standard Link operation allow users to link Issue with another.

The **Create And Link** Issue Operation provides a shortcut to a new Link Action following new rules.

It is allowed by the usage of the **Link Scheme**.

- How it works ...

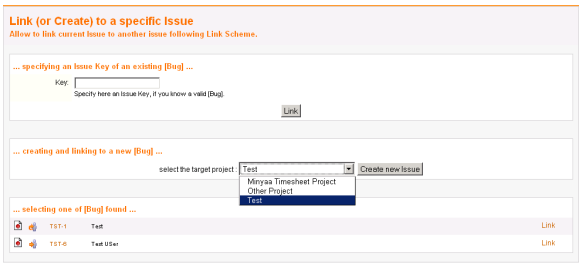

How it works ...

When a Project is associated to **Link Scheme**, a new set of Issue Operation are enabled depending on its definition.

If the **Link Scheme** defines that the Issue Type **Bug** may be linked to **Improvement** with the Link Type **Causes**, then an operation will be enabled for all **Bugs** ...

This operation will redirect the user to a dedicated page ...

where, will be provided :

- the list of **Improvement** issue, in the same project, having in their a Summary, Description or Comment containing the word of the original Issue.
- an input, to enter a specified Issue Key.
- a Submit button to create a new Issue, typed **Improvement**, and filled with original Issue fields.
