Inherit Priority

Usage cases

You want to apply, for a Sub-Task, the same Priority as its Parent Issue.

How it works

By defining this Workflow Function in a Transition of your workflow, you are able to force Sub-Task's Priority to be updated with Priority of Parent Issue.

Configuring the Feature

To configure the Inherit Priority Post-Function, please follow these steps :

- Since this Workflow Function does not need to be associated with a screen containing the concerned CustomFields, the function can be added in any Workflow Transition. It might be:
 - A Common Transition,
 - Or a Global Transition.

Note that if you need to use such Post-Function in a Initial Transition (Create Transition), you have to check that the Post-Function is used :

- After Create Issue Post-Function
- and before index Issue Post-Function

If it is not respected you will experience an error message when trying to perform the transition.

• Add the Inherit Priority Post-Function to any wanted transition.

For more information on adding a Post Function in Workflow, please see JIRA: Adding a Post Function

Inherits Priority from parent issue * Sets the priority of a subtask to that of its parent issue

• You will end up with a transition looking like:

3. * Sets the components of a subtask to that of its parent issue

And the XML Declaration as follow :

<post-function></post-function>
<function type="class"></function>
<arg name="full.module.key">fr.alkaes.minyaa.jira-plugin-minyaa-</arg>
workflowsinheritpriority-function
<pre><arg name="class.name">fr.alkaes.myaawf.workflow.postfunction.</arg></pre>
InheritPriorityFunction
