

Upgrade Notes for 1.0

Overview

With this 1st version of **Alkaes Minyaa Workflows** for JIRA 7.x, an Upgrade Task is provided in order to migrate your Workflow.

All needed migration are performed by Upgrade Tasks :

- fr.alkaes.myaawf.upgrade.UpgradeTask_001 : It is provided in order to correct missing Workflow Function migrations.

Details for UpgradeTask_001

Since long time, JIRA references Workflow functions (Conditions, Validators & Post-Function) by using the Class Name only with the argument "**class.name**". The Class was loaded in the JIRA Core Classloader.

Now, with JIRA 7.x, it has introduced the argument "**full.module.key**" ... It allows to have related classes load in the BundleClassLoader allowing the Workflow Function to see private Components provided by its plugin.

With this Upgrade Task, the Workflows Function of Minyaa 3.x are updated in order :

- to switch to the new package of **Minyaa 4.x** plugin : **fr.alkaes.myaawf.*** (In previous versions, these packages were not standardize, and some time based on *com.atlassian.jira.workflow.**)
- to reference correctly the "**full.module.key**"
