

# Auto-Transition Service

## Overview

This service allows you to evaluate if there is an Auto-Transition to executed in a scope of Issue.

It is a way to implement Auto-Transition **on Change Event** or **on Temporal Event**.

For each found Issue, the **Auto Transition Service** delegates to the **Auto Transition Manager**, the research of these Auto-Transitions.

## Auto Transition Service Configuration

To configure the Auto-Transition Service:

1. Add the Class **fr.alkaes.myaawf.autotransition.service.AutoTransitionService** in Service Definition and schedule it..

[Add Service](#)

Add a new service by entering a name and class below. You can then edit it to set properties. Mail handlers should be added or edited via our new [incoming Mail](#) section.

[Update](#) [Cancel](#)

2. Perform the Service definition :

Specify its scope of analysis. It may be based on :

- a Filter
- a Project
- a Project Category

AutoTransitionService fr.alkaes.myaawf.autotransition.service.AutoTransitionService	<ul style="list-style-type: none"><li>• REQUEST: None</li><li>• PROJECT: Minyaa Suite</li><li>• CATEGORY: None</li><li>• SEARCHER: Vincent Thouli</li></ul>	Daily every 15 minutes	<a href="#">Edit</a> <a href="#">Delete</a>
--	---	------------------------	---

3. Specify the user to use as Requester. It may differ from current user, and be defined in the plugin settings page.

If need, you will able to reserve an Auto Transition to be executed only by accounts granted with the **Run Auto Transition** permission.

## Auto Transition Service Execution

For each execution of **Auto-Transition Service**, each Issue related tp the scope (Project, Category or Filter) will be evaluated by the **Auto Transition Manager**.
