

Global Permission for Auto-Transition

What is it?

Since **JIRA 6.3**, plugins are able to extend Permissions (*Project Permissions* and *Global Permissions*).

With **Minyaa Time**, the feature **Auto-Transition**, provided by the **OSWorkflow** framework, is implemented and requires a dedicated *Global Permission*.

In order to avoid conflict, this *Global Permission* is provided by **Minyaa Core**.

On this page:

- [How to configure them ?](#)
- [How to use it ?](#)

How to configure them ?

Nothing special to do. As soon as the plugin is installed, enabled and licensed, the **Run Auto-Transitions** Global Permission is available in JIRA.

But, note that this Global Permission is only a declaration of new permission. Only plugins that know it can use it.

The Global Permission Key is : **RUN_AUTO_TRANSITION**

How to use it ?

The **Run Auto-Transitions** Global Permission is used in **Minyaa Time** in the Workflow implemented for the **Timesheet Management**, but it can be also used with the Permissions Workflow Functions provided by **Minyaa Core**.
