Edit and View Parameters

It is possible to select one of available Global Permissions.

Update parameters of the 'All Global Permissions Validator' Validator for this transition.

Update parameters of the 'All Global Permissions Validator' Validator for this transition.

Permission: Run an Auto-Transition ▼

The permission to check.

When defined, the Validator will be configured to evaluate if current user is granted for the selected Global Permission.

Triggers Conditions Validators Post Functions

The transition requires the following criteria to be valid [Add validator](#)

* Validator to allow only users having the permission **Run an Auto-Transition** to execute the transition.

XML Declaration

The Validator configuration may be done in XML in Worflow descriptor as follow :

```
<validator name="" type="class">
  <arg name="class.name">fr.alkaes.myaa.workflow.validator.
GlobalPermissionValidator</arg>
  <arg name="permissionKey">GlobalPermissionKey</arg>
</validator>
```

The **GlobalPermissionKey** has to be replaced by the wanted Global Permission Key.
