View Custom Fields

It has no more sense since JIRA 7.12.X, due to the new View Customfield page.

Overview

As soon as your JIRA Instance defines a complex configuration, the number of Custom Fields may increase quickly.

Even, if you success to limit the number of Custom Fields, you may also introduce some a large number of projects with their own set of screens, and/or have some fields editable during Workflows Transitions.

Consequently, when you access to the *View Custom Field* screen, you will certainly have a very large screen, where you will see for each Custom Field the list of screens where it is defined.

Contributors

User Picker (multiple users)

Issue type(s):
Global (all issues)

OS [Affair, Create] (Affair People)

OS [Affair, View] (Affair People)

OS [Catalog Equipment, Create] (Catalog Equipment People)

OS [Catalog Equipment, Edit] (Catalog Equipment People)

OS [Catalog Equipment, View] (Actors)

Enhancement

The enhancement proposed by this plugin is to provide an Expand/Collapse feature for each Custom Fields.

For each Custom Fields, a count of screen is added in bottom of the screen list and allows, when clicking on it, to expand or to collapse the screen list.

| Expanded | Contributors | User Picker (multiple users) | Issue type(s): Global (all iss | | * | |
|-----------|--------------|------------------------------|--|---------|-------------|--|
| Collapsed | Contributors | | ssue type(s): (Global (all issues) | item(s) | \$ ~ | |

It appears to be a small gain, but by accumulating all you Custom Fields, you will see the difference.

Sample

Below a example with a JIRA Instance 5 Projects, 8 Workflows, 86 Custom Fields and 31 Screens. When expanded, we have to scroll on 9 screens, and 6 when collapsed.

Imagine the gain with more complex JIRA Instances.
