Users From Selected Role

What is it?

This customfield allow to identify a set of users depending on a selected role.

People

Assignee:	? Unassigned
	Assign to me
Reporter:	Administrator
Multi User from Selected Project Role:	dev2, dev8, Developper 1, Developper 11
Votes:	0
Watchers:	1 Stop watching this issue

How to configure them ?

When adding a new **Customfield**, select the Customfield Type **Multi Use from Selected Role** :

No field preview	**Multi User from Selected Project Role (ALKUS)** Customfield containing the list of Users of a selected Project Role (From another Customfield)

Then, you will be able to configure your customfield in order to identify the concerned **Project Roles** and how the identified users are rendered.

|	
Applicable contexts for scheme:	Edit Configuration Issue type(s): Global (all issues)
Default Value:	Edit Default Value
Field:	Edit Field Multi Project Role Picker
Display Mode:	Edit Display Mode Displayed as SHOW_USERS

The identification of the Project Roles will be done by selecting any fields able to store a Project Role Name (a simple **Text** field or the **Project Role Picker**) :

Configure the User Field for the Custom field [Multi User from Selected Project Role]

Select the User Customfield to use for identifying the users.

User Field:
