Overview

The goal of [Alkaes JIRA Plugin Field Administration Enhanced](#) is to provide a set of enhancements in the JIRA Administration pages. It is mainly provided by Javascript injections in order to simplify the access to Field Management, but not only :

- View Customfields Screen
- View Screens
- View Field Configuration
- Add Permission Screen
- ...

Features

Enhancement around Fields

- [View Custom Fields](#) — The enhancement in the View Custom Fields screen consists into the provision of an Expand/Collapse feature of Custom Field details. It has no more sense since JIRA 7.12.x, due to the new View Customfield page.
- [View Field Configuration](#) — The enhancement in the View Fields Configuration screen consists into the provision of an Expand/Collapse feature of Fields details
- [REST API - Fields Configuration](#) — Theses APIs allow you to hide Field from Field Configurations

Enhancement around Screens

- [View Screens](#) — The enhancement in the View Screen screen consists into the provision of an Expand/Collapse feature of Screen details

Enhancement around Workflows

- [Colorized Transitions](#) — This enhancement allow to have Colorized Transitions and also a better view of Normal, Alternate and Exception path of the Workflow.
- [Lightened Workflows Lists](#) — The goal for the enhancement in the Workflow List screen consists into allowing a more quicker load of the list. This feature is available only with a valid license.
- [Lightened Workflows Schemes List](#) — The goal for the enhancement in the Workflow Schemes List screen consists into allowing a more quicker load of the list. This feature is available only with a valid license.

Enhancement around Rendering

- [Add Permission](#) — The enhancement in the Permision screen consists simply in a re-arrangement of list of Permissions and Security Type. Since JIRA 7.1.X, this enhancement is obsolete due the new way to add Permissions in a Permission Scheme through an Edit Permission Popup.
- [Administration Docker](#) — This enhancement based on a quick Docker in Administration Pages allows to gain space for the rendering of the more relevant content of each of these pages.
- [Highlighting Administration Menu section](#) — This enhancement allows to highlight the Administration Menu section.
- [More Auto-Completion](#) — This enhancement allows you to benefit of Auto-Completion capabilities in more case.

Misc.

Some of enhanced are provided also or only through REST APIs.

- [REST API - Clear Caches](#) — Theses APIs allow you to force Cache clearing.
- [REST API - Browse Filesystem](#) — Theses APIs allow you to navigate in File System.
