

Worklog Type by Workflows

WorklogType Required Permission

When Minyaa Suite introduces the Worklog Type, some improvements have been asked in order to force users to specify the Worklog Type, and not let it undefined.

This feature is available only where Minyaa Time is used with Minyaa Workflows.

The Workflow MetaAttribute *minyaa.jira.issue.worklogtype.required* is available and let you the ability to specify a Boolean or a Condition (It can be done using the [Boolean and Condition Attribute Editor](#)).

This boolean evaluation will define if the Worklog Type are required

This options may be also defined at the [Edit Action](#) level in order to be applicable for all steps.

Condition defined at Step level will override those defined at Edit Action level.

- At the Workflow Step level

```
<step id="1" name="Open">
  <meta name="jira.status.id">10100</meta>
  <meta name="minyaa.jira.issue.worklogtype.required">com.
company.MyEditableIssueCondition</meta>
  <actions>
    <common-action id="10" />
    <common-action id="20" />
  </actions>
</step>
```

- At Edit Action level (See KAAM-190 and KAAM-226), which will be assumed for any Step

```
<global-actions>
  <action id="2" name="Edit Issue" >
    <meta name="minyaa.jira.operation.id">1</meta>
    <meta name="minyaa.jira.issue.worklogtype.required"
>true</meta>
    <restrict-to> ... </restrict-to>
    <validators> ... </validators>
    <results> ... </results>
  </action>
</global-actions>
```

For restricting allowed Worklog Types

You may have also the need to specify which Worklog Type is applicable for your project, even for a specific Workflow Step ...

Then, Minyaa provides a Workflow MetaAttribute named *minyaa.jira.issue.worklogtype.allowed*, editable with the [Worklog Type Editor](#).

Proposed Worklog Type will be then restricted in Worklog Page and [Worklog Dialogbox of Fast Worklog Gadgets](#).

The list of Ids (for allowed Worklog types) will appended as value of the Meta-Attribute

On this page:

- [WorklogType Required Permission](#)
- [For restricting allowed Worklog Types](#)

```
<step id="1" name="Open">
  <meta name="minyaa.jira.issue.worklogtype.allowed">1,2,3</meta>
  <actions>
    <common-action id="10" />
    <common-action id="20" />
  </actions>
</step>
```

- [Getting started](#)
