Main Features

Minyaa Predefined Reports provides a new solution to share pre-configured reports, providing a new **Project Scheme**.

To benefit this features, just process into 3 steps :

- Catch the configuration of your reports,
- Configure a set of Report Schemes
- Access to your predefined reports

Capturing Report Configurations

To be able to define quickly your **Report Scheme**, a mechanism is appended to any JIRA Reports, allowing you to save your own Report Configurations in the Main Reports Scheme.

Configuring Reports Schemes

All captured **Report Configurations** will have to be copied from the Main Reports Scheme to any others of your own Reports Schemes.

To share correctly you **Report Configurations** with your colleagues, it will be needed to contextualize each Report Configurations in order to make them based on the execution context.

See **how to configure Reports Scheme** in order to define different set of pre-configured reports, and then, associate each of your projects to one of these schemes.

Using shared Report Configurations

Predefined Reports can (will) be used from different pages of JIRA ...

- In the Reports Project Tab Panel of the Project View,
- (Future releases) In new Gadget, similar as the Fragment Gadget,
- (Future releases) As a Menu in the Issue View,

Older versions ...

For previous versions of Minyaa Reports (Minyaa Suite 3.x), please refer to Minyaa Reports 3.5.x .
