

# Initial Requirements

This plugin provides a workaround related the issue <https://jira.atlassian.com/browse/JRA-38337>.

By using the previous Workflow Editor (Flex version) and some small edit in the XML descriptor, we are able to implement Recursive Global Transitions.

It was resolving many issue in our Workflow Design.

Since JIRA 6.x, Workflows were altered on publication.

Instead of 1 transition, you'll have x number of transitions to manage.
