

Log Work ...

Overview

Minyaa Time provides different extensions around the Log Work feature of JIRA ...

Log Work by Delegation

It is the ability provided to power user to log work for one of user authorized to log work on a project. Also, it will be possible to correct/complete the logged time from one Team Member.

Log Work as Issue Field

It allows you to append, as allows JIRA since **4.2**, a Log Work Field in Transition Screen. Even if it is a native feature now, you will need to continue with it if you want to benefit from [Worklog Type](#).

Log Work from Dashboard

It allows you to have, in a Gadget, a short list of Issues for which you can quickly add/correct logged work.
