Group Delegation

User Management for Project Manager allows the delegation of Group Membership management to powered users depending on an advanced configuration.

To benefit from this feature, just follow these 2 steps :

- Define **who** is allowed to **manage Group Delegations**
- Define a set of Group Delegations :
    - for which groups (Delegated Group) in which project a delegation has to be created ?
    - which powered users are allowed to benefit from this delegation ?
    - which type of delegation is created ?

Group Delegation Permissions

As **JIRA Administrator**, you can grant any users the Group Delegation Management since the features of **Users and Group Management for Project Manager** are driven by Custom Permissions.

- The Global Permission **Manage Group Delegation** allows to define who can create **Group Delegations**
- A set of **Project Permissions** allows users to acquire some privilege on **Delegated Groups** identified by the **Group Delegation** for a Project.

Define a Group Delegation

As **Granted User** with the permission **Manage Group Delegation**, you will be allowed to define which groups will be delegated in which Projects.

Manage Delegated Groups

As **Powered User** granted with a "**Manage" Group Delegation**, you will be allowed to manage :

- Group's Membership for Users
- Group's Membership for Groups (Nested groups)
