

Log Work from Dashboard

Which problem to solve ?

In order to gain time, you need :

- to log work on different issues from one place,
- to have quick view of spent time for the last days and "working" issues.

How Minyaa solves this problem ?

Minyaa provides two LogWork gadgets that allow you to log work on multiple issues.

How it works ?

These two LogWork gadgets display *Worklogs* for a set of issues identified differently.

- The **Worklog Gadget based on Worklogs** provides a quick access **to issues you have recently worked on, the "Working Issue"**.
- The **Worklog Gadget based on Filter** provides a quick access to **issues matching a saved filter**.

Both gadgets provide a way to quickly enter worklogs on a list of issues.

The concept of **Working Issue** comes with Minyaa ... Each time you log some work on an Issue, the Issue is marked as a Working Issue for you account.

How to configure your LogWork gadgets ?

Worklog Gadget based on Worklogs

As mentioned above, this gadget displays only *Working Issues*. Its configuration is done with following parameters ...

Portlet for a Fast Work Log (Based on Worklog)

Worklog History: 5d
Delay for which Worklog are displayed

Retention Delay: 20d

Concepts

Working Issue : A Working Issue is an Issue that has been identified as such, as soon as a User :

- has entered a Worklog
- has added it as Working Issue in the **Worklog Gadget based on Worklogs**,

It will be no more marked as a Working Issue as soon as :

- it has been removed from the Gadget (✕)
- the list of Working Issues is regenerated (↺)

Worklog History:

Worker : A Worker is an User who has identify some Issue in his Working Issue list. He can identified an the Worker Customfields.

represents how far in the past, Worklogs should searched for ?

Using the LogWork Gadgets

The both gadgets differs only on the way the Worklogs are filtered (See Configure your LogWork gadget).

Displayed details ...

In both cases, the gadgets display all Worklogs matching with the expected scope :

- Worklogs from Issues matching with the specified filter
- Worklogs of "working" issues

The Worklogs are displayed by Issue with :

- Issue Type icon
- Issue Status Icon (its legacy version)
- Issue Key
- Issue Summary
- Sum of logged work considering the specified period (Worklog History)
- and some operation ...

And, for each displayed Issue, the related Worklogs for the specified period are displayed with :

- Start date
- Status
- Comment
- Logged time
- and some operation ...

Available operations ...

In case of Gadget based on logged work, an additional header is available ...

with 2 operations :

-  : It refreshes the list of "working" Issues depending on the *Worklog History* and the *Retention Delay* parameters.
For more information on Worklog History and Retention Delay, take a look at: [Configure the Fast Worklog Portlet based on Worklogs](#)
-  : It allows to add an issue (identified by its *Key*) to the list of watched issues.

For each displayed Issue, the below operations are available :

-  : It expands or collapses the displayed *Worklogs* for the current issue.
-  : It allows to switch to the *Create Worklog* panel for the current issue.
-  : It removes the issue from "working" issue. *The issue won't be deleted.*

For each displayed Issue, the below operations are available :

-  : It allows to switch to the *Edit Worklog* panel for the current *Worklog*.
-  : It allows to increase the duration of the current *Worklog* by the *Default Low Time*, as defined in the portlet's/gadget's configuration.
-  : It allows to increase the duration of the current *Worklog* by the *Default High Time*, as defined in the portlet's/gadget's configuration.
-  : It deletes the current *Worklog*.

Entering and Editing Worklogs ...

By switching to Create Worklog or Edit Worklogs panels, you will be able to create/edit a *Worklog* ...
