

Upgrade Minyaa 6400.4.4 & 7000.4.4

Please check previous Upgrade Notes before continuing ...

On this page:

Minyaa 4.4 includes fixes from Minyaa Reports and Minyaa Spread.

For Minyaa Reports, the bug [ALKMPR-4](#) is related some inconsistency in the storage of Predefined Report Config.
Some of you predefined reports may have been orphan and a clean up is required on DBMS side.

Process as follow :

- Check if you are concerned by the issue :

```
Select * From propertystring Where id in (
  Select id From propertyentry Where entity_name in
  ('ReportConfig','reportConfig')
  and entity_id not in (Select report_config_id From reportentity)
);

Select id, entity_id From propertyentry Where entity_name in
('ReportConfig','reportConfig')
and entity_id not in (Select report_config_id From reportentity);
```

(SQL Statement designed for MySQL. Others DBMS may require some correction)

- If previous SQL Statement returns rows, your are concerned. Then perform the following clean up of these orphan configurations ...

```
Delete From propertystring Where id in (
  Select id From propertyentry Where entity_name in
  ('ReportConfig','reportConfig')
  and entity_id not in (Select report_config_id From reportentity)
);

Delete From propertyentry Where entity_name in
('ReportConfig','reportConfig')
and entity_id not in (Select report_config_id From reportentity);
```

(SQL Statement designed for MySQL. Others DBMS may require some correction)
