Update parameters of the All Global Permissions Condition Condition for this transition.

Update parameters of the All Global Permissions Condition Condition for this transition.

Permission:

The permission to check.

When defined, the condition will be configured to evaluate if current user is granted for the selected Global Permission.

Triggers Conditions Validators Post Functions

All of the following conditions

* Condition to allow only users having the permission **JIRA Administrators** to execute the transition.

* Condition to allow only users having the permission **Run an Auto-Transition** to execute the transition.

XML Declaration

The Condition configuration may be done in XML in Workflow descriptor as follow :

```
<condition type="class">
  <arg name="class.name">fr.alkaes.myaa.workflow.condition.
GlobalPermissionCondition</arg>
  <arg name="permission">GlobalPermissionKey</arg>
</condition>
```

The **GlobalPermissionKey** has to be replaced by the wanted Global Permission Key.
