Update Old Worklog Permission

Defaultly, JIRA allows Worklog update through **EDIT WORLOG** Permission.

Minyaa Suite introduces the permission EDIT_OLD_WORKLOG to extend this control as follow ...

A Worklog is updatable by a User if he has

- the Permission to Update the Worklog (**EDIT WORLOG** Permission),
- **And** the Permission to Update the Old Worklog.

The **Permission to Update the Old Worklog** is evaluated if :

- the user has not the **Project Administration** Permission
- and the user has not the EDIT_OLD_WORKLOG Permission
- and the **WorklogUpdateDelay** ("Worklog.Update.Delay.In.Days" in Application Properties) is positive.

The condition is evaluated as follow :

- Today is not older than **EOM-1M+nD** (End Of Last Month + n Days), where **n** is provided by the **WorklogUpdateDelay** parameter.

The **WorklogUpdateDelay** ("Worklog.Update.Delay.In.Days" in Application Properties) may be modified through the Minyaa Settings page.
