Worklog Types

Which requirement?

You want to log work on an issue and need to specify on what kind of activity it is relevant.

This requirement has been raised to Atlassian in 2003 (JRA-1780) without being take in account.

Which solution?

Alkaes Minya Time introduces the concept of **Worklog Types**, allowing you to assign a qualification to your worklogs. e.g. *Analysis, Development, Testing, ...*

Also, when logging work, you are able to specify the relevant Worklog Type :

- in the *Worklog Gadget* from your Dashboard (see Log Work from Dashboard),
- in the *Log Work Dialog box*, when logging your spent time from Issue View or Issue Navigator,
- in any *Transition Screen*, where you have added the Log Work System field (see Log Work as Issue Field).

When logged work is qualified by a Worklog Type, you are able to see it :

- in the Issue Panel Time Spent,
- In different Worklog Reports,

How to implement?

Based on the same way you are currently configuring fields of your projects in JIRA, by organizing the **Fields** (System & Custom) in **Field Configurations** and themselves in **Field Configuration Scheme** per **Issue Type,** you can now implement a complete **Worklog Type** configuration.

You have different steps to follow :

- First at all, you have to create a set of predefined **Worklog Types** (see Manage Worklog Types).
- Then, you can create a set of **Worklog Type Configuration** where you will identify a subset of relevant Worklog Types (see Manage Worklog Type Configurations)
- and at the end, you complete the configuration by defining a set of **Project Scheme** dedicated to **Worklog Type Scheme** (see Manage Worklog Type Schemes)

When you have completed the different configuration, you will be able to associated *Worklog Type Scheme* to your projects.

- Manage Worklog Type Configurations
- Manage Worklog Type Scheme
- Manage Worklog Types
- Worklog Types
