

Log Work as Issue Field

What is it?

The problem you need to solve: Your developers forget to log their time.

How Minyaa solves this problem: Minyaa allows you to prompt your developers to log time when they do a transition in a workflow.

⚠ Since **JIRA 4.2** , a new Issue System Field (**WorklogSystemField**) is provided (surely inspired by **Worklogger** Custom Field of Minyaa 🤖) and allow you to log work during transitions.

You will think that this Custom Field is no more useful? **You should not!**

Worklogs are extended with [Worklog Type](#) and [Worklog Status](#) for **Timesheet Management**.

Then, you should use this CustomField in place of **Worklog System Field**.

How it works

This feature works by prompting a user to enter a worklog through a custom field.

For example, when you transitioning an issue (here on **Resolve** transition), you can also implement with resolution type and a comment, the input of Logged Work, where it will be possible to enter:

- Spent time, Remaining estimate as the default **WorklogSystemField**
- but also the **Worklog Type** for you or another team's member (See [Log Work by Delegation](#)).

Note also, that you can also add this custom field in the Create Issue screen.

By this way, you can also prompt a user to enter a worklog at Issue Creation step.

Configuring the Feature

To configure the *Worklogger* custom field, please follow these steps:

1. Determine which screen will hold the *Worklogger* Custom Field. It might be:
 - a. Any screen that you already use,

- b. One of the default screen (Resolved Screen, Workflow Screen)
 - c. A screen you create specifically for this purpose
- For more information on adding a screen to JIRA, please see [JIRA: Defining a Screen](#)*
2. Add the **Worklogger** Custom Field in the selected screen,
 3. If needed, you can add the **Worklogger Validator** to extend validation.

Note that, if you are using **JIRA 4.2** and over, you will have to replace in existing screen, the default **WorklogSystemField** by the customfield, if you want benefit from associated features :

- [Worklog Types](#)
- Support of Worklog Status for Timesheet Management
- Custom Permissions for Log Work

- [Minyaa Suite](#)
- [JIRA: Log Work during a Transition](#)
- [JIRA: Adding Custom fields](#)
- [JIRA: Defining a Screen](#)
- [JIRA: Configuring Workflow - Using a Screen](#)
