

Time Tracking Security

What is it?

The problem you need to solve: Time Tracking Fields (Estimates Time, Spent Time and Worklog) need more security than JIRA provides.

How Minyaa solves this problem: Minyaa tries to offer different solutions to enhance the security.

Allowing to show or to hide Timetracking Field

Minyaa Time extends Issue Viewer in order to apply the Screen Rendering for the Time Tracking Field.

In other terms, if you remove the Time Tracking Field from the Edit Screen definition (Screen associated to the Edit Operation), it will not be displayed in Edit Screen and also in View Screen.

As soon as the Time Tracking Field is removed from View and Edit Screen, it is possible to allow some authorized users to edit it, following the below steps :

1. [Create a new screen](#) where the **Time Tracking** field will be added.
2. Create a [Global Transition](#) in your Workflow
3. [Append Conditions](#) allowing the access to this Transition (Group Membership, ...)
4. Associate the created screen to the **Global Transition**

Authorized users will be able to access to the Global Transition and also edit the Time Tracking Field.
