

Permissions on Worklog

The default **Log Work on Issue Operation** is proposed depending on Work On Issue Permission defined in Permission Scheme.

Minyaa Time extends *Worklog Service* and *Workflow Manager* in order to provide new Permissions and Conditions to extend the way to manage Worklogs for Issue.

On this page:

- [Worklog Permissions](#)
- [Workable Issue](#)
- [Worklog Type managed at Workflow Level](#)

Worklog Permissions

Minyaa provides Worklog Custom Permissions usable directly in your Permission Scheme.

- Two Permissions in order to define Worklog Permissions based on period named *Closure Period* :
 - [Create Worklog](#) Permission.
 - [Update Worklog](#) Permission.They are both managed through [Plugin settings](#).

- One permission to allow or deny the ability to browse worklog :
 - [Browse Worklog](#) Permission.

Workable Issue

This [Workable Issue](#) Permission is defined at the Workflow level.

Worklog Type managed at Workflow Level

The Worklog Type are also managed by Workflow configuration ..

- If [Worklog Types are required](#) ?
- Which [Worklog Types are allowed](#) ?

- [Minyaa Suite](#)
