

Update Old Worklog Permission

Overview

Natively, JIRA allows Worklog update through **Edit own worklogs** and **Edit all worklogs** Permissions.

Minyaa Time introduces in **Worklog Create Closure** concept and its associated Project Permission : **Create Old Worklogs**.

Edit old Worklog

Gives the ability to Edit old Worklog.

Edit

If you enable the **Worklog Update Closure** feature, (see [Closure Periods](#)) you will be able to allow some of your users to override these new rules by granting them with the Project Permission **Update Old Worklogs**.

How to enable

Go to Minyaa Settings page and set to **Yes** or **No** the relevant setting ...

Worklog Update Closure:

No

If enabled, a control will done to check if a user is allowed to update Work depending on Worklog Start Date

See [Closure Periods](#)

How it works

When [Closure Periods](#) enabled, by granting the **Update Old Worklogs** Project Permission to only allowed users, only them will be able to override **Worklog Update Closure** rules;

A Worklog is updatable by a User if he has

- the Permission to update the worklog (**Edit own Worklog** or **Edit all Worklog** Project Permissions),
- And (
 - he has the **Project Administration** Permission or the **Update Old Worklog** Permission
 - Or the Closure Period rules does not block the operation .)

See [Closure Periods](#) to understand on the rules are evaluated.
